Quality Lightweight Bicycle Components

KINGSBERY USA ROAD AND O/R SEAT POSTS

One piece shaft of extruded 6061 T6 alloy, CNC machined and engineered to be strong yet lightweight make our Seat Post the best on the market. This micro adjustable seat post has two hardened steel screws, one for tilt adjustment and one for clamping. This mechanism is hidden under the saddle with the screws easily reached from the underside. Available in 200mm (weight approx. 185gm), 230mm (weight approx. 201gm) and 350mm (weight approx. 280gm) lengths, colors: silver and black ano. Diameters available are 25.0, 25.4, 25.8, 26.0, 26.2, 26.4, 26.6, 26.8, 27.0, 27.2 and 27.4 diameters.

KINGSBERY USA ROAD AND O/R HUBS

Distinctive styling featuring a one piece 7075 alloy shell and serviceable SKF sealed bearings press fit into the shell and onto the axle highlight the hubs by Kingsbery USA. We offer a variety of standard hole drillings including 24, 28, 32, and 36h as well as special drillings and preslotted holes for bladed spokes. Rear hubs are available in 120, 126, 130 and 135mm spacing. These hubs come in silver and black ano. They weigh only 180gm (including skewer) in the front and 230gm (including skewer) in the rear. These hubs follow the Kingsbery USA philosophy of "light but strong by design."

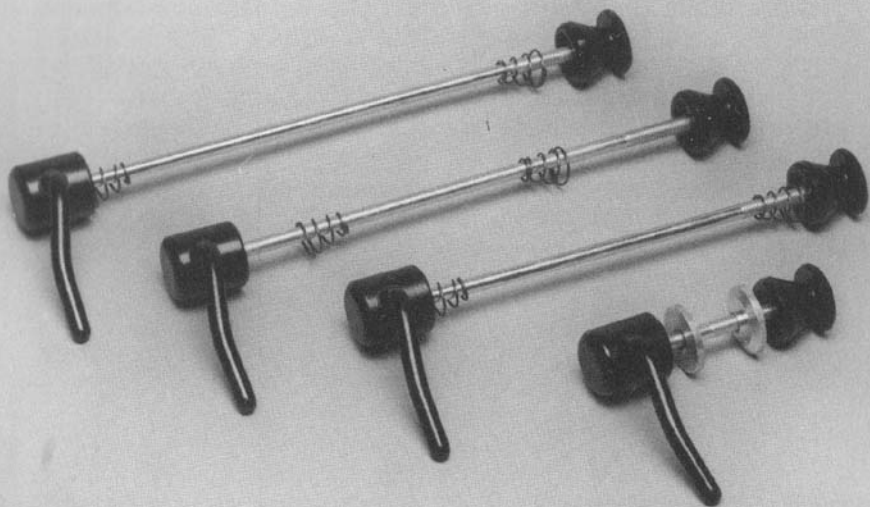

KINGSBERY USA WATERBOTTLE CAGES

The clean lines, lightweight and superior strength of the Kingsbery USA Waterbottle Cage will make this a popular item for all cyclists. Weighing only 37gm our aluminum alloy cages maintain full spring temper and feature no destructive heat weld, which causes cages to break. Braze on hardware is required for mounting. With nine colors to choose from (anodized: silver, black, red, blue, emerald green, aqua, champagne and purple / powder coated: white) Kingsbery USA Waterbottle Cages are the only choice for the active cyclist. Also available in titanium.

KINGSBERY USA HEADSETS

The Kingsbery USA headset is one of the lightest on the market weighing only 95gm for a standard 1" model. The headsets have an alloy body machined for the best possible fit and are anodized silver or black. The tapered needle bearings in races provide more surface area than conventional bearings. More surface area spreads the force over a larger area reducing wear and giving better performance. The bearings and steel liners are completely replaceable making the headset reusable and ultimately less expensive. Headsets are available in standard 1" as well as oversized 1 $\frac{1}{8}$ " and 1 $\frac{1}{4}$ ".

KINGSBERY USA SEAT POSTS Q.R. ROAD AND O/R SKEWERS

When it comes to lightweight components that work, its Kingsbery USA. This is true of our quick release seat post binders, road and O/R skewers. Constructed with a steel shaft, aluminum alloy cam cap and threaded adjust nut makes these one of the lightest skewers and binders on the market. Binders weigh in at only 50gm, front skewers at 60gm and rears at 63gm. The cam action is designed to be stronger so the grip will hold tighter. Available with black handles and three cam cap colors: black, white and silver. Road and O/R skewers also available in titanium.

KINGSBERY USA BOTTOM BRACKETS

Machined from 4140 Chrome-moly steel or titanium, Kingsbery USA Bottom Bracket axles are available in 109-117mm symmetrical doubles or 121-125mm non-symmetrical triples. The axle has a two degree taper which is suitable for use with both Shimano and Campy cranksets. The sealed bearings are pressed into the cup instead of onto the axle preventing movement of the bearing in the cup which eliminates wear. Both 2024 T4 aluminum cups in English or Italian threading, are adjustable to allow for a perfect chain alignment. The extra beefy lockrings have six grooves for use with most Bottom Bracket tools.

KINGSBERY USA TITANIUM PRODUCTS

Introducing the newest product line for Kingsbery USA, titanium seat posts, cages, skewers, seat post quick release and bottom bracket spindles. These fine products have the same qualities of our alloy products. They are constructed of aircraft grade titanium for superior strength and lightness. Our titanium seat posts are available in 180mm (weight approx. 158gm), 200mm (weight approx. 165gm), 330mm (weight approx. 206gm) and 380mm (weight approx. 221gm). Diameters available are 26.6, 26.8, 27.0, and 27.2. Titanium skewers are available in Road and O/R style. Titanium cages weigh approximately 56gm.
